## Course 6431A:

### Managing and Maintaining Windows Server 2008 Network Infrastructure Servers

Length:	2 Day(s)
Published:	June 16, 2008
Language(s):	English
Audience(s):	IT Professionals
Level:	300
Technology:	Windows Server 2008
Type:	Course
Delivery Method:	Instructor-led (classroom)

#### **Course Outline**Module 1: Managing a Windows Server 2008 Network Infrastructure Server Lifecycle

This module explains how to create an effective plan for managing the addition, removal, and migration of Windows Server 2008 Network Infrastructure Server roles.

#### **Lessons**

- › Key Features of Windows Server 2008
- › Managing Implementation Plans of Server Roles
- › Managing Server Roles with the SCW

#### **Lab : Managing a Windows Server Infrastructure**

- › Planning for Additional Server Roles
- › Evaluating the Addition of the Windows Server 2008 File Services Roles for Branch Office Requirements
- › Managing Network Roles by Using the SCW
- › Automating Server Roles With Command-Line Tools
- › Evaluating the Documentation, Backup, and Rollback Plans

11301 US Highway 301  
Thonotosassa, Florida 33592

Telephone: (813) 315-9883  
Fax Number: (813) 902-6160

After completing this module, students will be able to:

- › Describe the server roles and features of Windows Server 2008.
- › Create plans for the addition of infrastructure roles within a Windows Server 2008 environment.
- › Manage the server roles by using the Server Manager console.
- › Automate administrative tasks.

### **Module 2: Monitoring Windows Server 2008 Infrastructure Roles**

This module explains how to develop effective baselines for monitoring and managing Windows Server 2008 Network Infrastructure Server roles. It also explains how to evaluate performance baselines, establish effective monitoring rules, and design acceptable thresholds and alarms when problems occur.

#### **Lessons**

- › Monitoring Reliability and Performance in Windows Server 2008
- › Using the Performance Monitor for Analysis
- › Using the Reliability Monitor for Analysis

#### **Lab : Monitoring Windows Server 2008 Infrastructure Roles**

- › Evaluating Server Baselines
- › Monitoring Network Performance by Using the Reliability and Performance Console
- › Monitoring Server Stability by Using the Reliability Monitor
- › Evaluating the Performance Baseline Recommendations

After completing this module, students will be able to:

- › Define the criteria for monitoring key server roles for performance issues.
- › Create a performance baseline for monitoring server performance.
- › Monitor specific system activity by using the Performance Monitor as well as establish monitoring rules and thresholds.
- › Enable Data Collector Sets.

### **Module 3: Managing Network Access Protection**

11301 US Highway 301  
Thonotosassa, Florida 33592

Telephone: (813) 315-9883  
Fax Number: (813) 902-6160

This module explains how to plan for the implementation of Network Access Protection (NAP), create solutions by using NAP, and implement NAP.

#### **Lessons**

- › Planning NAP
- › Creating Solutions by Using NAP
- › Implementing NAP

#### **Lab : Managing the Network Policy and NAP Roles**

- › Implementing Network Access Protection
- › Discussing How NAP Can Help Protect Woodgrove Bank's Network From Security Problems
- › Configuring NAP by Using DHCP Enforcement

After completing this module, students will be able to:

- › Describe the security solutions that are available when implementing and configuring specific roles services within the network policy and access server roles.
- › Describe the considerations for implementing NAP.
- › Plan for implementing the key components of NAP, which include policy validation and NAP enforcement.

#### **Module 4: Managing Remote Access**

This module explains how to plan for the implementation of a server environment that is running the Routing and Remote Access Services (RRAS) role.

#### **Lessons**

- › Planning RAS Server Roles
- › Managing RAS Authentication
- › Evaluating Network Policies

#### **Lab : Planning for the Implementation and Configuration of a RAS Role**

- › Evaluating a VPN/NPS Implementation

11301 US Highway 301  
Thonotosassa, Florida 33592

Telephone: (813) 315-9883  
Fax Number: (813) 902-6160

- › Implementing a VPN SSTP Connection
- › Creating a Network Policy

After completing this module, students will be able to:

- › Plan and manage RAS roles.
- › Evaluate RAS policies.

#### **Module 5: Managing and Maintaining DNS and DHCP Server Roles**

This module explains how to evaluate and plan for the deployment of DNS and DHCP infrastructure Windows Server 2008 roles throughout an enterprise environment.

##### **Lessons**

- › Managing DNS and DHCP Server Roles
- › Maintaining DNS and DHCP Server Roles

##### **Lab : Managing DNS and DHCP Server Roles**

- › Evaluating the DNS and DHCP Server Roles
- › Adding Scavenging to the DNS Server Roles
- › Monitoring the DNS and DHCP Server Roles

After completing this module, students will be able to:

- › Plan the implementation of the DNS and DHCP Server roles.
- › Maintain DNS and DHCP Server roles for optimal operation.

#### **Module 6: Maintaining Security for Network Servers**

This module explains how to analyze network server security and enable the host firewall with advanced security.

##### **Lessons**

- › Network Server Role Security
- › Configuring Windows Firewall With Advanced Security

##### **Lab : Maintaining Security for Network Servers**

---

Telephone: (813) 315-9883  
Fax Number: (813) 902-6160

- › Evaluating and Configuring Network Server Hardening
- › Configuring Security by Using Windows Firewall With Advanced Security

After completing this module, students will be able to:

- › Analyze network server security by using the appropriate security tools and methods.
- › Enable the host firewall for additional security.
- › Use the Security Configuration Wizard (SCW) to apply security changes.
